

**AMENDMENTS TO THE SPECIFICATION:**

After Paragraph [0028], insert the following:

-- As seen in Figure 1, the control circuit, which is designated as the control circuit 32, is coupled to the pump vaporiser 14. The control circuit 32 is also coupled to the door 2 for detecting a movement of the door 2, whereupon, in response to a detection by the control circuit 32 that the door 2 has been undergone a given first number of door opening or closing processes, the control circuit 32, after a pre-determined time interval, controls the magnet 25 in the pump vaporiser 14 to be driven through a second given number of movement cycles. --
